until
01.09.2019

The latest generation of ready-to-use, high-performance programming devices has been optimized for engineering with the TIA Portal and designed for mobile use in machines and plants for configuration, commissioning, service, and maintenance. The new Simatic Field PG M6 programming device, with a stylish silver housing cover and M6 inscription, is equipped with a high-speed DDR4 work memory of up to 32 GB and an impact-resistant SSD mass storage device of up to 2 TB.

Thanks to the light, rugged and completely shielded magnesium housing, the semi-ruggedized device is suitable for use in harsh industrial environments. Additionally, bumpers on exposed parts of the housing protect against shocks and vibrations.
